

### An Overview of Energy Efficiency

Energy efficiency means reducing the amount of energy that you need to perform a particular task. When you practice energy efficiency, you increase or maintain your level of service, but you decrease the energy used to provide that service through efficient technologies. Examples include ENERGY STAR appliances, compact fluorescent and LED light bulbs, better insulation for buildings, more efficient windows, high-efficiency air conditioning equipment, and vehicles with higher miles per gallon (mpg). Another distinct strategy is energy conservation, which means that you change your behavior or lifestyle to reduce energy use. Examples include carpooling, using mass transit, turning thermostats down in the winter and up in summer, and other behavioral changes.

Improving energy efficiency is a “win-win” strategy — it saves money for consumers and businesses, reduces the need for costly and controversial new power plants, increases the reliability of energy supply, cuts pollution and greenhouse gas emissions, and lowers energy imports. There is vast potential for improving the energy efficiency of homes, appliances, businesses, and vehicles throughout Utah.

### Quick Facts:

- ◆ Population, 2015: 2,990,632
  - ◆ Population growth rate, 2008-2015: 1.67% per year
  - ◆ Number of households, 2015: 1,037,825
- Source: United States Census Bureau.*

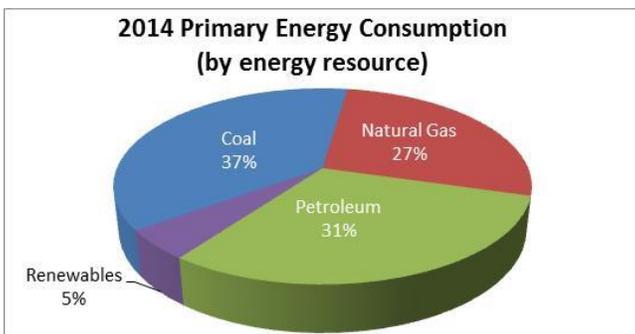

### Primary Energy Consumption (2014)

- ◆ Primary energy consumption: 798.0 trillion Btu
- ◆ Growth rate, 2008-2014: 0.63% per year
- ◆ Primary energy consumption per capita: 271.3 million Btu
- ◆ Ranking, energy consumption per capita: 36
- ◆ Ranking, total energy consumption: 34
- ◆ Ratio of consumption to production: 0.68

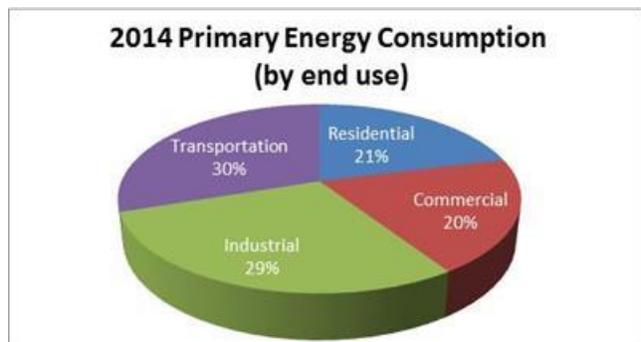

### Energy Expenditures (2014)

- ◆ Total energy expenditures: \$10.8 billion
- ◆ Ranking, energy expenditures: 34
- ◆ Energy expenditures per capita: \$3,653
- ◆ Ranking, energy expenditures per capita: 45

*Source: U.S. Energy Information Administration, State Energy Data System, March 2017.*

Renewables include hydropower, wood, solar, geothermal and waste materials.

Primary energy use includes the losses in electricity generation and distribution. Rankings are position among U.S. states plus D.C. (1 is highest, 51 is lowest).

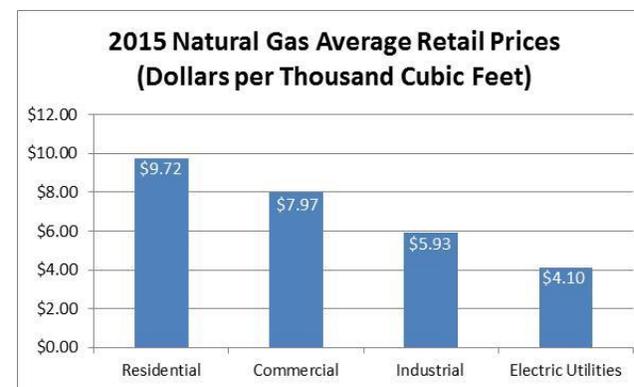

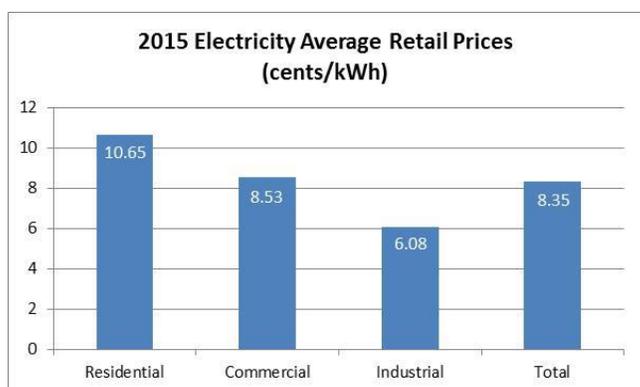

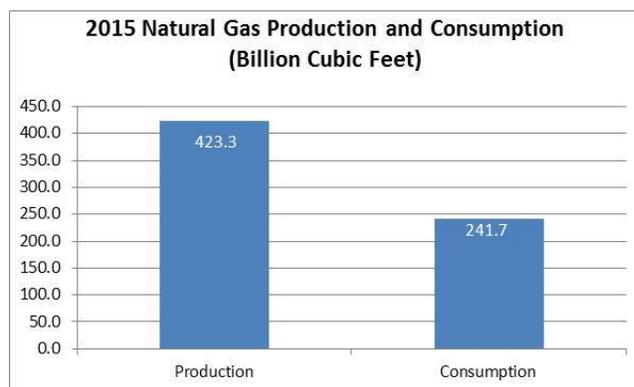

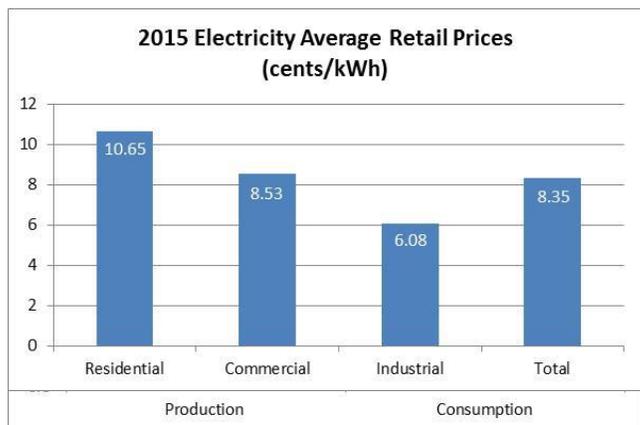

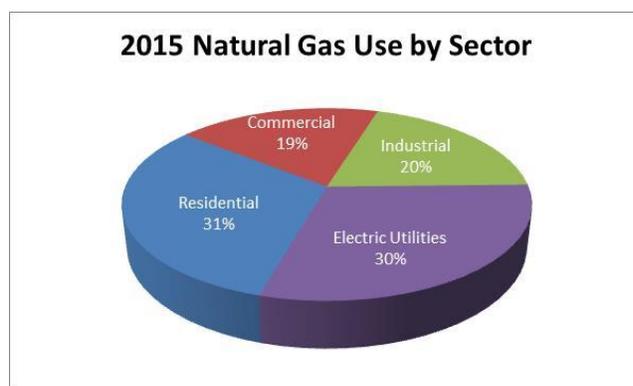

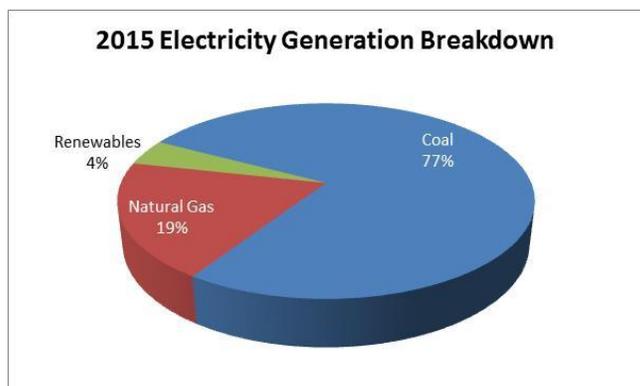

# UTAH ENERGY FACT SHEET

## Electricity Use (2015)

- ◆ Total retail sales: 30.2 billion kWh
- ◆ Ranking, total retail sales: 35
- ◆ Consumption growth rate, 2008-2015: 0.98% per year
- ◆ Electricity use per capita: 10,096 kWh
- ◆ Residential electricity use per household: 8,785 kWh
- ◆ Average retail price, all sectors: 8.54 cents/kWh
- ◆ Ranking, average electricity price: 42

## Natural Gas Use (2015)

- ◆ Natural gas consumption: 230.1 Bcf
- ◆ Ranking: 36
- ◆ Consumption growth rate, 2008-2015: 0.37% per year
- ◆ Natural gas use per capita: 76,951 cf
- ◆ Residential natural gas use, (per residential consumer) 65,659 cf

## Status of Energy Efficiency in Utah

### State Energy Efficiency Goals

Former Governor Jon Huntsman issued Executive Order 2006-004, which established a goal of increasing energy efficiency in the state of Utah by 20 percent by year 2015. The goal applies to all forms of energy use in the state, including electricity, natural gas, gasoline, and other petroleum products. In 2014, Gov. Gary Herbert issued the Utah Energy Efficiency and Conservation Plan, which includes 26 recommendations for increasing energy efficiency in the state.

- ◆ Read the Utah Energy Efficiency and Conservation Plan: <http://energy.utah.gov/utah-energy-efficiency-conservation-plan/>

### Electricity Demand-Side Management

Rocky Mountain Power (RMP), the main electric utility in Utah, offers a wide range of demand-side management programs to its customers. These programs include financial incentives and technical assistance. Total spending on electric utility energy efficiency and load management programs in 2016 was about \$60.4 million, or 2.9 percent of utility revenues.

- ◆ Info about RMP's residential programs: <http://www.rockymountainpower.net/res/sem.html>.
- ◆ Info about RMP's business programs: <http://www.rockymountainpower.net/bus/se.html>.

### Natural Gas Demand-Side Management

The gas utility in Utah, Questar Gas Company, began implementing efficiency programs in 2007, offering a wide variety of programs to residential and commercial customers. In 2016, Questar spent about \$23.3 million on these programs.

- ◆ Info about Questar's DSM programs: <http://www.thermwise.com>.

### Building Energy Codes

Utah has adopted the 2015 International Energy Conservation Code (IECC) for all new commercial buildings statewide and a modified version of the 2015 IECC (with weakening amendments) for all new residential buildings. The U.S. Department of Energy estimates that by adopting the 2015 IECC (rather than the 2009 version), new homes will save customers \$228 per year on energy costs.

- ◆ For more information, visit <http://www.energycodes.gov/adoption/states>.

### Commercial PACE

In 2013, the Utah legislature approved Commercial Property Assessed Clean Energy (PACE) legislation. This law allows cities and counties to provide a long-term, property tax-based method of financing energy efficiency and renewable energy upgrades to commercial buildings. The law allows interested cities and counties to sell bonds to raise capital for loans that would be offered to property owners.

### State Energy Efficiency Scorecard

The American Council for an Energy-Efficient Economy (ACEEE) has ranked states based upon scores in six categories including: 1) utility and public benefits of energy efficiency programs; 2) combined heat and power (CHP); 3) building energy codes; 4) transportation policies; 5) appliance and equipment efficiency standards; and 6) state government initiatives. In the 2016 state scorecard, Utah ranked 20<sup>th</sup> among all states with a score of 20 out of a possible 50 points. <http://aceee.org/research-report/u1606>

### Electricity Conservation Potential and Impacts in Utah\*

|                             |                   |
|-----------------------------|-------------------|
| Savings potential in 2020:  | 20% Avoided       |
| new power capacity:         | 1,444 MW Net      |
| dollar savings (2010-2030): | \$1.7 billion Net |
| increases in jobs by 2020:  | 3,100             |
| Water savings by 2020:      | 3.2 B gal/year    |

\*Based on the High Efficiency Scenario in SWEEP's study, *The \$20 Billion Bonanza: Best Practice Utility Energy Efficiency Programs and Their Benefits for the Southwest*. This study, completed in 2011, presents the energy savings potential and impacts from a strong commitment to utility energy efficiency programs over a 10-year period.

## Residential Energy Consumption Survey (2015) Housing

### Characteristics

The U.S. Energy Information Administration (EIA) has published housing characteristics data from the 2015 Residential Energy Consumption Survey. The EIA presents regional aggregates of household characteristics in the Mountain North region, which includes Colorado, Idaho, Montana, Utah, and Wyoming. The table below indicates the percentage of households that report having, using or practicing the following equipment and/or behaviors in their homes:

|   |     |
|---|-----|
| Find household too drafty at least some of the time | 53% |
| Single Pane Windows                                 | 29% |
|   |     |
| Homes with Efficient Lighting                       |     |
| At least one CFL Bulb                               | 90% |
| At least one LED Bulb                               | 40% |
|   |     |
| Two or more Refrigerators                           | 36% |
| Energy Star Refrigerator                            | 45% |
| Energy Star Dishwasher                              | 30% |
| Energy Star Clothes Washer                          | 50% |
| Three or more Televisions                           | 40% |
| Electric Heat (all types)                           | 21% |
| Programmable Thermostat                             | 62% |
| Central Air Conditioning                            | 57% |
| Use an Evaporative or Swamp Cooler                  | 17% |
| Use a Ceiling Fan                                   | 71% |
| Electric Water Heating                              | 29% |
